

# proGlide 5016

podiatry/wound care procedure chair

**More than just a Step in the Right Direction**

## Doctors love it, and they told us why!

*We can put the patient in about any position to make them comfortable while making it easy for us to provide the best care.*

*Patients love the proGlide 5016! More than one has told me they they want to take it home and put it in their living room.*

*The standard 650lb weight capacity helps with our largest patients.*

*Cleaning up the floor is easy, and the room is cleaner because when the foot rest lowers, we have full access to cleaning all around the chair.*

*It just has a much smaller footprint than the other chairs we use so it makes our exam room look and feel so much bigger.*

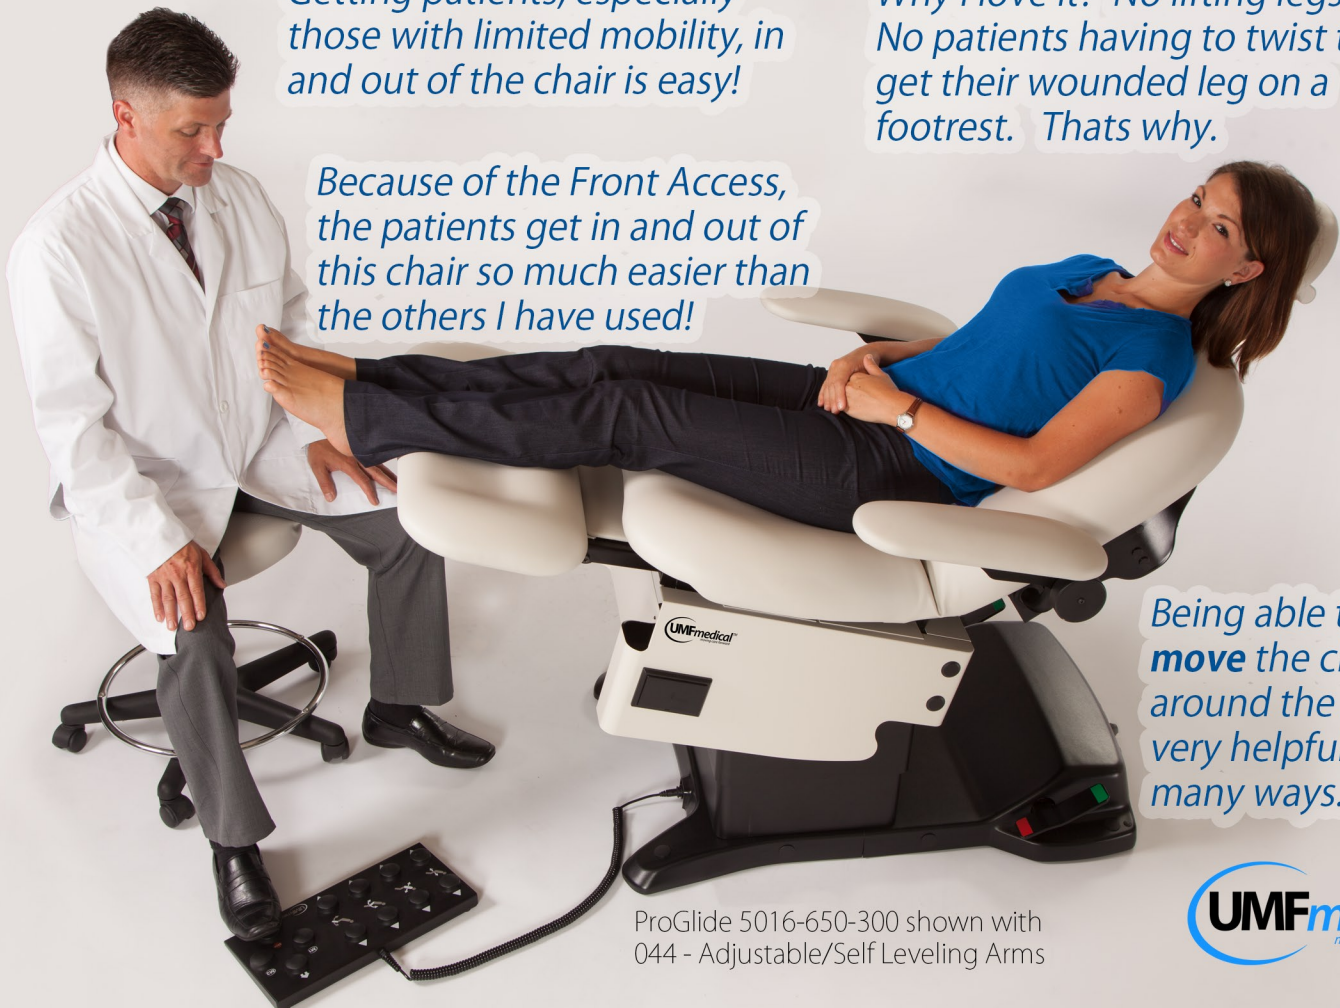

*The 5016 is comfortable and solid. Our patients feel safe and secure in it. That's so important to us!*

*Getting patients, especially those with limited mobility, in and out of the chair is easy!*

*Why I love it? No lifting legs! No patients having to twist to get their wounded leg on a footrest. Thats why.*

*Because of the Front Access, the patients get in and out of this chair so much easier than the others I have used!*

*Being able to easily **move** the chair around the room is very helpful in so many ways.*
